To Whom It May Concern:I am writing to express my displeasure with NAB's petition 04-160. This country's market economy is built on the principle of competition; and it is the existence of competition that drives much of the advancements in technology, services, etc. NAB's petition 04-160 will limit competition, will stifle technology, and will prevent an improvement in service to customers. Satellite radio is a service which I pay for and enjoy. Traffic & weather is a positive part of that, and should not be removed simply because some powerful conglomerate wishes to stifle competition for their own (only only their own) benefit.
